

The Igaware Email Filtering appliance filters email before it reaches your email server, keeping inboxes **free from spam, viruses and other malicious content.**

Your email server will instantly be protected for greater reliability while staff productivity and morale will be boosted.

Daily automatic updates ensure you are always protected from the latest threats.

**Anti-Spam** uses a powerful combination of an intelligent email filter, greylisting and image spam detection that filters out 99.8% of unsolicited bulk email.

**Anti-Virus** includes the Clam AV and the award winning Kaspersky Anti-Virus engines.

**Anti-Mail Bombing** protects against Denial of Service attacks and Mail Bombing that can cripple your email server.

**Igaware Anti-Phishing** identifies fraudulent emails that try to trick staff into giving away confidential personal or business information such as bank logon details.

**Content Filtering** removes potentially malicious payloads from email such as executable files, script tags and many more.

**Email Reporting** details every email sent and received and shows how many unwanted spam and virus emails have been filtered.

**Exchange Integration** means that only email for users that exist on your exchange server get passed through. This reduces the load on your exchange server keeping it running efficiently.

**Email Server** – if you don't have an email server then the Igaware appliance can be enabled as a full blown email server (optional).

## Technical Specification

### General

- High performance email filtering appliance
- Option to enable as an email server
- Automatic updates and system monitoring
- Easy to use web interface
- Highly configurable
- Compatible with Windows, Apple & Linux O/S
- Scalable
- Available in range of hardware configurations including small form factor, tower and rackmount servers

### Filtering Functions

- Anti-Spam
  - Header tests
  - Body phrase tests
  - Bayesian filtering
  - Automatic address whitelist/blacklist
  - Manual address whitelist/blacklist
  - Collaborative spam identification databases (DCC, Pyzor, Razor2)
  - RBL
  - DNS Blocklists
  - Character sets and locales
  - Create/Edit Rules
  - Image Spam detection
- Anti-Virus
  - ClamAV
  - Kaspersky
- Anti-Mail Bombing
- Anti-Phishing
- Content Filtering
- Reporting
  - By user and date showing sender, recipient, size and subject
  - Details of all spam, viruses and filtered content
- Exchange Integration for user verification

### Support

- Fully managed solution
- Proactive system monitoring
- Automatic updates
