

An Igaware appliance is multi-functional server engineered to deliver a wide range of services including; Internet Security, Email Security, Email & Groupware Server, File Server, Web Filtering, Backup & Disaster Recovery.

Benefits

Rock Solid

Our software is engineered properly, delivering solutions that keep going on and on for years without any downtime. Our hundreds of customers will happily testify to this.

Secure at all times.

Protection systems are continuously updated so you have complete peace of mind.

Compatible with both Windows and Apple Mac computers (even together).

You won't need to upgrade your desktop computers for them to work with Igaware.

Support is at hand, often before you know it.

The health of your Igaware box is automatically monitored. This proactive approach keeps you operational 24x7.

Easy to use.

A simple to use web interface makes administration easy. Day-to-day tasks such as adding new users are quick and easy.

Low maintenance

Automatic updates means there are no manual updates or upgrades to worry about, and no equipment to reboot. You can focus on productive tasks.

Affordable whether you have 3, 30 or 3000 staff.

Igaware eliminates the complexity and cost inherent in other solutions.

Igaware software is under continuous development with new features being added all the time. For latest updates check our website at www.igaware.com/latest_updates.php

Features

General

- High performance multi-functional network appliance.
- Automatic updates & system monitoring.
- Easy to use.
- Highly configurable.
- Compatible with Windows, Apple & Linux O/S.
- Choice of services.
- Scalable.
- Available in a range of hardware configurations including small form factor, tower and rackmount servers, RAID/NON-RAID, Single/Multi-Processor.

Administration

- Web admin interface accessible via https.

Stateful Inspection Firewall

- Port Forwarding & Port Input options.
- Outbound traffic policies configurable for machines on the LAN.
- Auto detection of LAN machines and assignment of access policies.
- Network Intrusion Detection.

Virtual Private Networking

- IPsec (3DES and AES).
- PPTP.
- SSL.

Web Filtering

- Block access to sites in pre-defined categories.
- Prevent downloading of dangerous content/file types.
- Company defined black and white lists.
- Implement access controls according to day & time schedule.
- Apply access policies to machines, users and groups.
- Integration with Active Directory for single sign on authentication.
- Reporting.

Internet Connectivity

- Internet connectivity via Ethernet Router, DHCP Cable Modem, USB Speedtouch, Dialup Modem. Supports PPOE.
- One handed mode available.
- 3G USB Dongle.
- WAN Failover/Load balancing.

LAN Connectivity

- Ethernet.
- VLAN.
- DMZ.

Network Management

- Health Monitoring & Status Console (email alerts).
- Network Device Monitoring (email alerts).
- Network Detection (NMAP).
- DHCP Server.
- LDAP.
- DNS.
- Time Server.
- Windows & Active Directory Integration (including PDC for roaming user profiles).
- Network Tools (NMAP, PING, WHOIS, Trace Route).
- Network Vulnerability Scanner (NESSUS Server).

Email Server

- POP3, IMAP, SMTP.
- Multiple domain support.
- Single/multidrop delivery.
- Aliases.
- SMTP relay.
- SMTP forward to existing email server.
- Outgoing signature.
- Archiving.
- Reporting.
- Queue status and management.

Email Filtering/Security

- Anti-Mail Bombing (DOS attacks)
- Anti-Virus (Clam AV & Kaspersky AV engines)
- Filename Filtering
- Content Filtering (Attachments, HTML)
- Anti-Phishing
- Anti-Spam
 - Header tests
 - Body phrase tests
 - Bayesian filtering
 - Automatic address whitelist/blacklist
 - Manual address whitelist/blacklist
 - Collaborative spam identification databases (DCC, Pyzor, Razor2)
 - RBL
 - DNS Blocklists
 - Character sets and locales

- Create/Edit Rules
- Image Spam detection
- Exchange integration (user verification)

Zarafa Server (Exchange Replacement)

Outlook features

Email

- Basic mail features; reply, forward, copy, move and print email
- Multiple format Send email in HTML, RTF or plain text format
- Send flag which display low/normal/high importance
